The process of installing Photoshop is not difficult. First, you'll need to download the software from Adobe's website and then follow the instructions to install it. Once the installation is complete, you will need to locate the installation.exe file and run it. Once that file is opened, you'll need to locate the patch file and copy it to your computer. The patch file helps to unlock the full version of Photoshop. After you have the patch, run it and follow the instructions on the screen. Once the patch is applied, you will have a fully functional version of Photoshop installed on your computer.

Now you can create a snapshot of your document and invite a reviewer to comment on it. Comments show up in real time in a panel within Photoshop where you can see and address them. You can continue to update the PSD with reviewers seeing those updates when the file is refreshed or reopened. Adobe Photoshop software is notorious for being one of the slowest and least power efficient programs with large files. Today's update greatly speeds up Photoshop's performance for large files. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC. Regards! Sren - Update Note: Lightroom 5 and Windows 7 need to be able to read each other's localizations. However, it's trivial for you to create a new folder on your Windows 7 system, start Lightroom 5, and let the sidebar take precedence. - Update Note: Lightroom 5 and Windows 7 need to be able to read each other's localizations.
