4. The Extension Platform: Creative Cloud subscription, exciting the web designers and is now familiar to the many an ardent Adobe Photoshop and Adobe Illustrator users. It's a modern, faster, and more flexible extension engine. There are some metadata-driven features to create new effects even better than the native tools. While there are still Smart Objects and several other tools that still need updating, as well as updated support for the HD and Web-Ready graphic file formats, extensions are for the most part an engine that is there to make the web design workflow feel more like the desktop experience. Many design teams are now looking to compete and win in new markets like mobile that are still a bit opaque to us as web designers. 5. Artboards: With the transition to compliance with the web open standards on the web, there was a lot of debate on how to manage files on the desktop and smartphones. In-browser editors have been a large factor in addressing the issues, but many designers don't yet understand how to do this. Recently, Adobe delivered a set of creatives that enables you to create many web compliant assets right in Photoshop. Pasted assets can be used with version control right from the browser and are a common asset control approach to web assets that are managed better than traditional file-based approaches. Adobe Photoshop and Photoshop Elements are the premier multimedia applications on PCs. Adobe also offers the widely popular Creative Suite, which has a similar design approach--software modules that let creative people work on images, create money-making applications, and design interfaces.
