Apart from this latest upgrade, I should say that I tested this version (version 24) using the following: iMac with Retina 5K display (Mid 2014) with OS X Yosemite 10.10.5 (16E30fKK); MacBook Pro with Retina 5K display (Mid 2013) with OS X Yosemite 10.10.5 (16E30fKK); MacBook Air (Mid 2012) with OS X Yosemite 10.10.5 (16E30fKK); and an iPad Retina (Late 2013) with iOS 8.2 and OS X Yosemite (16E305c6). I also included the latest CS6 update, which is based on the previous version, from the Mac OS only version 17.0.6 (16E206K66). First, let's start with the applications' interface. In the past, they were all pretty similar. However, even though they were still pretty stable, Lightroom's design helped me much more than the other applications. That is because feather tool, built-in modules like Grid for maintaining and fixing geometric relationships, and the dark background color made the interface much more welcoming for me. It even felt different from Adobe's other products, such as Photoshop Elements. That's because Lightroom's applications are better-designed overall. So, I wouldn't want to compare its interface with those of copycats. Nevertheless, as you can see, Lightroom's interface has been slightly improved. With most of the buttons on the left side working as expected, you can view and perform control the settings for the selected image. Control Center shows the current selection mask and lets you hide it (of course, you can always bring it back), as well as select the new color swatches that now show up in the Color Picker, scene modes, and styles.
